

SMART EMPLOYEE ATTENDANCE AND LEAVE MANAGEMENT SYSTEM

Mini Project for CRT Training

Student-Friendly Overview

Introduction

Employee Attendance and Leave Management System is a digital platform designed to automate attendance tracking and leave management processes. It helps organizations maintain accurate attendance records and manage leave requests efficiently.

Problem Statement and Objectives

Many organizations rely on manual attendance registers and paper-based leave applications.

Objectives:

- Automate attendance tracking
- Manage leave applications digitally
- Improve record accuracy
- Reduce paperwork
- Increase organizational efficiency

Methodology and Workflow

Employees log into the system and mark attendance. When leave is required, employees submit a leave request.

Managers review and approve or reject requests. All records are stored in a database and reports are generated for monitoring.

Modules and Features

Employee Module: Attendance marking, leave application, profile management.

Admin Module: Employee management, leave approval, report generation.

Key Features: Attendance tracking, leave balance calculation, dashboards, reports, and record management.

Benefits and Future Scope

Benefits:

- Faster leave processing
- Better transparency
- Reduced paperwork
- Improved accuracy
- Easy record access

Future Scope:

Mobile app integration, biometric attendance, email notifications, cloud storage, and AI-based analytics.

Conclusion

The Smart Employee Attendance and Leave Management System provides an efficient solution for managing attendance and leave records. It reduces manual effort, improves transparency, increases productivity, and supports future enhancements.
